

Greetings:

A brief Comment on the BPL (Docket 03-104) I do not believe enough research has been done to protect users on air of frequencies between 2, and 80 MHz. Once BPL has been initiated, it may be like trying to stop a locomotive at full throttle, with no engineer on board. Please do a little more research into this technology before allowing it to be implemented. Also, I fully agree word for word with the comments filed by the American Radio Relay League that you have on file.

Thanks     Tom Maguire
